The human apolipoprotein(a) kringle domains IV36 (LK6 protein), IV37 (LK7 protein) and V38 (LK8 protein) together form the angiogenesis inhibitor. LK68 protein. LK68, LK6, LK6, LK7 and LK8 are inhibitors are of endothelial cell proliferation, cell migration and normal development of capillaries in the chick embryo chorioallantoic membrane (CAM). LK68 protein, its single kringles or their functional equivalents, are useful for treating angiogenesis-mediated diseases, such as cancer, rheumatoid arthritis, psoriasis or ocular angiogenic disease in animals or humans. LK68 is useful as an anticancer agent ar also for inhibiting primary tumour growth.
   This sequence represents the kringle 5 domain of human apolipoprotein (apo(a)), which was used to generate monoclonal antibodies. Apo(a) is characteristic glycoprotein component of lipoprotein(a) (Lp(a)), which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel angiogenesis inhibitor, LK68 for treating angiogenesis-mediated diseases, e.g. cancer and rheumatoid arthritis, has human apolipoprotein(a) kringle domains IV36, IV37 and V38 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Apolipoprotein A; apo(a); glycoprotein; heart disease; detection; diagnosis.

Increased Lp(a) concentrations may inhibit fibrinolysis by reducing the generation of plasmin. This may be effected by competition for plasminogen cell-surface receptors, by inhibition of activation of plasminogen, or by competition for binding sites on fibrin. Anti-apo(a) antibodies can be used in a novel method of Lp(a) quantitation. Such antibodies are not cross-reactive with plasminogen, LDL, and the various types of apo(a) kringle 4 domains. Previous methods of Lp(a) immunoassay used antibodies that bind to the apo(a) kringle 4 domain, which is present in multiple copies. One method, TERUMO BLISA (enzyme-linked immunosorbent assay), tended to produce erroneous results with cardiac and diabetic patients, especially those with very high Lp(a) concentrations (greater than 50 mg/dL). Apo(a) monoclonal antibodies may be a accurate markers for the detection and diagnosis of heart

LK68 protein contains the amino acid sequences of human applipoprotein(a) kringle domains IV36 (LK6 protein), IV37 (LK7 protein) and V38 (LK8 protein). LK68, LK6, LK7 and LK8 are inhibitors are of endothelial cell proliferation, cell migration and normal development of capillaries in the chick embryo chorioallantoic membrane (CAM). LK68 protein, its single kringles or their functional equivalents, are useful for treating angiogenesis-mediated diseases, such as cancer, rheumatoid arthritis, psoriasis or ocular angiogenic disease in animals or humans.

LK68 is useful as an anticancer agent and also for inhibiting primary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAR22503;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This hybrid plasminogen/u-PA sequence is described in the specification although the sequence itself is not given. The sequence given here has been compiled using the human plasminogen sequence from Patent No. WO9013640 and the human u-PA sequence from the SWISSPROT database (UROK$HUMAN). The hybrid fibrinolytic enzymes are useful in the treatment of thrombotic diseases. See also R22499, R22502 and R22503.

The sequence given here has been compiled using the human plasminogen sequence from Patent No. WO9013640 and the human u-PA sequence from the SWISSPROT database (UROKSHUMAN). The hybrid fibrinolytic enzymes are useful in the treatment of thrombotic diseases. See also R22499, R22502 and R22504.

preparation of Kringle five peptide fragment for treating various disorders such as anglogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by incubation and isolation -

The invention relates to a method of preparing plasminogen kringle peptide fragments. The method comprises mixing mammalian plasminogs elastase in the ratio 1:100-1:300, followed by incubating and isola

plasminogen and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The specification describes a method for generating angiostatin in vitro. The method comprises contacting plasminogen with a sulfydryl donor, or culturing cells capable of producing plasminogen activator in conditioned culture medium (CCM) and contacting the CCM with plasminogen. Angiostatin produced by method of the invention is useful for treating animals with angiogenesis diseases. It is useful for treating an angiogenic disease such as neoplastic diseases (e.g. tumour and tumour metastasis), benign tumours (e.g. hemangiomas, acoustic neuromas, etc), connective tissue disorders (e.g. rheumatoid arthritis and atherosclerosis), ocular angiogenic diseases (e.g. diabetic retinopathy, corneal graft rejection, etc), cardiovascular diseases, cerebral vascular diseases, diabetes—associated diseases and immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Plasminogen; human; kringle domain; endothelial cell proliferation; angiogenesis; antiproliferative; antiarteriosclerotic; cytostatic; antipsoriatic; antiinflammatory; antiulcer; antirheumatic; antiarthritic;

The kringle 5 peptides are innibitors or any any account of cendothelial cell proliferation and migration. The peptides are useful contreating angiogenic diseases, primary and metastatic solid tumours conditions of various organs such as breast, genital tract, conditionally from haematopoietic malignancies such as leukaemias and contraining from the year also used for the prophylaxis of various autoimmune contraining from the peptides are abnormal stimulation of condition of the particle of disease and ulcers). The peptides are also useful as a birth control agent which have angiogenesis as a pathologic consequence (e.g., cat scratch contrained the peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta.

CC Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.

CC Note: This sequence is not shown in the specification, but is derived come the full length human plasminogen sequence (AAB01887) shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                              New soluble derivative of anti-angiogenic polypeptide useful for treatment of primary or secondary cancers, contains covalently a membrane-binding elements for targeting .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-JAN-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 low membrane affinity that are covalently attached to a soluble anti-angiogenic polypeptide such as a non-catalytic region of human plasminogen. The MBEs interact independently with thermodynamic additivity, with components of the vascular endothelium. (I) provide targeted delivery of the anti-angiogenic polypeptide to cell membranes and sites of active angiogenesis, particularly the vascular endothelium, and therefore increase the local concentration and reduce the risk of adverse effects on normal processes elsewhere in the vasculature. They are used in a claimed method of treatment of primary or secondary tumour.
The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract,
                                                                                                                                                     Preparation of Kringle five peptide fragment for treating vario disorders such as anglogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by incubation and isolation -
                                                                                                                                                                                                                                                                 Davidson DJ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcras). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.

Note: This sequence is not shown in the specification, but is derived from the full length human plasminogen sequence (AAB01887) shown in
                                                                                         Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by incubation and isolation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Plasminogen; human; kringle domain; endothelial cell proliferation; angiogenesis; antiproliferative; antiarteriosclerotic; cytostatic; antipsoriatic; antiinflammatory; antiulcer; antirheumatic; antiarthritic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      93
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          60
```

The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC the fragment. The kringle 5 peptides are inhibitors of angiogenesis and CC endothelial cell proliferation and migration. The peptides are useful CC for treating angiogenic diseases, primary and metastatic solid tumours CC and carcinomas of various organs such as breast, genital tract, CC endocrine glands, skin, tumours of the brain and eyes and solid tumours CC arising from haematopoietic malignancies such as leukaemias and CC lymphomas. They are also used for the prophylaxis of various autoimmune CC diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases CC (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber CC (g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber CC (g., psoriasis), blood vessel disease, atherosclerosis), diseases CC (e.g., psoriasis), as a pathologic consequence (e.g., cat scratch CC (sieases and ulcers). The peptides are also useful as a birth control CC agent which inhibits ovulation and establishment of the placenta. CC sequences AAB01906-B0191 represent fragments of human plasminogen used in an exemplification of the invention.

CC from the full length human plasminogen sequence (AAB01887) shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.

Note: This sequence is not shown in the specification, but is derived from the full length human plasminogen sequence (AAB01887) shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g., haematoidas, Osler-Webber conditions of the prophylaxis of various autoimmune diseases (e.g., psoriasis), blood vessel diseases (e.g., haematoidas, Osler-Webber conditions)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Plasminogen; human; Kringle 5 peptide; anti-angiogenesis agent; cancer; metastatic solid tumour; carcinoma; sarcoma; lymphoma; haemangioma; psoriasis; arthritis; macular degeneration; diabetic retinopathy; autoimmune disease; ocular disease; capillary proliferation; therapy;

joints, wound granulation, ulcers etc., also as contraceptives that inhibit ovulation and establishment of the placents. K5 antisers or (ant) agonists can be used similarly, optionally coupled to cytotoxic agents. Antagonists may be used to induce angiogenesis, e.g. for woun healing. The K5 peptides are also used to raise specific antibodies (for diagnosis and for affinity purification of K5 receptors. The K5 receptors may then be expressed in tumour cells to increase their response to the peptides or used for identification of smaller antagonists. The Ab are used to detect/quantify the peptides in inhibit proliferation of modells with low toxicity against normal cells. Typically they have 800-times greater inhibitory activity against bovine capillary cells in vitro than kringle 1-4 peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            plasminogen - useful as anti-angiogenesis agents for treating
cancer, psoriasis, arthritis etc., including gene therapy
                                                                                                                                                                                                                                                                                                                                                                 fragments can also be used to treat autoimmune or ocular diseases, capillary proliferation within atherosclerotic plaque, haemophiliac

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method of preparing plasminogen kringle 5 CC peptide fragments. The method comprises mixing mammalian plasminogen and CC elastase in the ratio 1:100-1:300, followed by incubating and isolating CC the fragment. The kringle 5 peptides are inhibitors of angiogenesis and CC endothelial cell proliferation and migration. The peptides are useful CC for treating angiogenic diseases, primary and metastatic solid tumours CC and carcinomas of various organs such as breast, genital tract, CC endocrine glands, skin, tumours of the brain and eyes and solid tumours CC syndrome such as leukaemias and CC lymphomas. They are also used for the prophylaxis of various autoimmune CC diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases CC (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber CC syndrome), diseases caused by excessive or abnormal stimulation of CC disease and ulcers). The peptides are also useful as a birth control CC disease and ulcers). The peptides are also useful as a birth control CC disease which inhibits ovulation and establishment of the placenta.

CC sequences AAB01890-B01894 represent, respectively, human, murine, Rhesus CC monkey, bovine and porcine plasminogen kringle 5 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Loc

Preparation of Kringle five peptide fragment for treating vario disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by incubation and isolation -
```

WPI; 2000-349573/30.

Example 17; Page -; 48pp; English.

the fragment. The kringle 5 peptides are inhibitors of angiogenesis and carcinomas cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, and carcinomas of various organs such as breast, genital tract, arising from haematopoietic malignancies such as leukaemias and carising from haematopoietic malignancies such as leukaemias and ymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasm in an exemplification of the invention. Note: This sequence is not shown in the specification, but i from the full length human plasminogen sequence (AAB01887) peptide fragments. elastase in the ra invention relates to on relates to a method of preparing plasminogen kringle 5 ments. The method comprises mixing mammalian plasminogen and the ratio 1:100-1:300, followed by incubating and isolating t. The kringle 5 peptides are inhibitors of angiogenesis and Bhown and

                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The invention relates to a method of preparing plasminogen kringle 5
CC peptide fragments. The method comprises mixing mammalian plasminogen and
CC elastase in the ratio 1:100-1:300, followed by incubating and isolating
CC the fragment. The kringle 5 peptides are inhibitors of angiogenesis and
CC endothelial cell proliferation and migration. The peptides are useful
CC for treating angiogenic diseases, primary and metastatic solid tumours
CC endocrine glands, skin, tumours of the brain and eyes and solid tumours
CC arising from haematopoietic malignancies such as leukaemias and
CC lymphomas. They are also used for the prophylaxis of various autoimmune
CC diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases
CC (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber
CC Syndrome), diseases caused by excessive or abnormal stimulation of
CC endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases
CC which have angiogenesis as a pathologic consequence (e.g., cat scratch
CC disease and ulcers). The peptides are also useful as a birth control
CC agent which inhibits ovulation and establishment of the placenta.
CC sequences AAB01906-B01919 represent fragments of human plasminogen used
CC in an exemplification of the invention.
CC Note: This sequence is not shown in the specification, but is derived
CC from the full length human plasminogen sequence (AAB01887) shown in

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score

Sequence 1, Application US/09748468
Patent No. US20010051347A1
GENERAL INFORMATION:

APPLICANT: Kundu, S.
APPLICANT: Kundu, S.
APPLICANT: Ziemann, R.
TITLE OF INVENTION: SPECIFIC ANTIBODIES TO KRINGLE 5 OF
TITLE OF INVENTION: APO(A) AND METHODS OF USE THEREFOR
FILE REFERENCE: 6296, US. 0.1
CURRENT APPLICATION NUMBER: US/09/748, 468
CURRENT FILING DATE: 2000-12-26
PRIOR APPLICATION NUMBER: 09/234,553
PRIOR APPLICATION NUMBER: 09/234,553
PRIOR FILING DATE: 1999-01-20
NUMBER OF SEQ ID NOS: 1
SOFTWARE: FastSEQ for Windows Version 3.0
SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH: 91

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
